CONTENTS

Chapter I	**Introduction**	**1**
	Low-frequency motions in macromolecules	5
	The essential factors of low-frequency motion in a macromolecule	7
	Some applications of the quasi-continuity model	7
	Some remarks on the Brownian motion	10
	Survey of the book	11
Chapter II	**Continuum Models of the Dynamics of Macromolecules**	**13**
	The model of fluid Brownian particles	13
	Approximate solution of the kinetic equation for ellipsoidal particles	17
	Correlation functions of dynamic variables	19
	Thermal motion of macromolecules and the Rayleigh scattering of light	20
	Internal dynamics of the macromolecule and the depolarized light scattering	22
	Thermal motion of macromolecules and the spectrum of Mössbauer absorption	26
	On the scattering of Mössbauer radiation from particles with internal excitations	31
Chapter III	**Dynamics of Vesicle-Like Droplets**	**37**
	On the vesicle-like droplets phenomenology	37
	Vibrations of microemulsion droplets and vesicles with compressible surface layer	39
	Characteristic equation for the surface vibration modes	42
	Analytical solutions for the normal mode frequencies	44
	Simple estimations, numerical solutions and discussion	48
	Interpretation of light and neutron scattering experiments on microemulsions: Effects of droplet fluctuations	53
	The scattering functions	55
	Quantitative description of the scattering experiments	61
	Concluding remarks on the description of scattering experiments	68
	On the discussion of scattering experiments in the literature	69
	Other probes of vesicle-like systems: Diffusing-wave spectroscopy on emulsions	73
	Optical birefringence and light scattering on vesicle-like droplets	74
	On two proposed methods for the measurements of interfacial tension	82
	Deformability of multilamellar vesicles	87

Chapter IV **Studies of the Brinkman-Debye-Bueche Model of Globular Macromolecules** **94**
A simple theory of the hydration effects on the spectra of absorption and Rayleigh scattering of Mössbauer radiation by globular macromolecules 94
Mössbauer absorption and scattering on hydrated macromolecules: effects of macromolecule flexibility 102
Hydrodynamic fluctuations of liquids with internal rotation inside a pore 110
Chapter V **Quasi-Continuity Modeling of the Low-Frequency Dynamics of DNA-Like Macromolecules** **116**
Nonlinear dynamics of DNA 117
A nonlinear continuum model of the DNA double helix dynamics 119
Base-base interaction and dissipation 125
Dynamic structure factor of solitons in model DNA 128
On low-frequency vibrations in DNA macromolecules 130
The modified Volkov-Kosevich model 132
Force constants and model parameters 135
Model frequencies and comparison with experiments 137
Resonance Raman spectroscopy observation of the LF internal DNA modes 140
Chapter VI **The Dynamics of Polymers in Solution with Hydrodynamic Memory** **146**
Long-time tails in the Brownian motion 146
Open problems and summary 148
The hydrodynamic Rouse-Zimm model of polymer dynamics 150
Analytical solutions of the hydrodynamic RZ model 153
Time scales in the polymer motion 159
The dynamic structure factor 162
The first cumulant of the DSF 168
Effects of hydrodynamic noise on the polymer dynamics 174
Single polymer dynamics in the presence of other polymers 179
Concentration dependent dynamic structure factor 183
Viscosity of dilute polymer solutions 189
Concluding remarks 190
References **192**
Summary **202**
